HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

March 1947 to February 1949.

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report on Hirings and Separations. The report form (required under the National Employment Service Regulations, 1948, Authority P.C. 4060) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 45,000 schedules are completed and returned to the Unemployment Insurance Commission in September and March of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

This report presents summary tables derived from the first four surveys. The data for the most recent six months (September 1948 to February 1949) must be considered as preliminary since the tabulation is based upon returns from some 80 p.c. of the establishments covered. Since, however, special efforts were made to include all large establishments in the preliminary tabulation 92 p.c. of covered employment is represented, so that only minor adjustments to the percentages presented here may be expected on the basis of the later returns.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month or, if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on strike or locked out unless they have separated from their employment. Employees on temporary layoff with definite instructions to return to work within thirty days are considered as still on the payroll and those absent on vacation (with or without pay) or because of sickness, accidents or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area, so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units and many firms whose

payroll records are maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey hirings, then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore the non-insured in industries coming within the purview of the Act are included. On the other hand, crews of vessels engaged in water transportation and longshoremen and stevedores are, on the whole, excluded since the hiring practices for those engaged in these occupations are such that data comparable with those secured for industry in general cannot be obtained for them. Logging is not included among the industries presented in these tables since the Unemployment Insurance Act applies to those engaged in logging only in British Columbia. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included since plans are now being formulated to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including those industries not separately specified in the balance of the table.

The accompanying tables present the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of that month.

The monthly percentages provided for the industry groups represent, then, gross hiring and separation rates in the industry groups to which they relate. They provide rates against which those interested in separation and hiring rates for individual establishments can measure their experience. In this way, the extent to which the labour turnover in an establishment is excessive may be ascertained and then a further more detailed study carried on by those concerned may reveal affected areas and suggest possible remedies.

Certain exceptional rates in the attached tables require some explanation. The relatively high hiring and separation rates for the manufacture of wood products and paper products are due, at least in part, to the influence of certain saw and planing mills and pulp and paper plants which operate logging crews and do not submit separate reports for their operations in the woods. In Recreation Service the high rates of hiring and separation during the spring and summer months are caused by the seasonal operation of such enterprises as carnivals, amusement parks and other outdoor recreational facilities. The relatively high seasonal turnover in Business Service during the Summer and early Fall is due to the inclusion in this group of exhibitions and fairs.

During the two-year period covered in this report the over-all hiring and separation rates for all industries in Canada have demonstrated a general decline. As expected the normal seasonal fluctuations in employment are reflected in generally higher rates of hirings

than of separations during the spring and summer months; a tendency toward equality in the Fall and early Winter; and generally higher rates of separations than of hirings during the Winter and early Spring.

Regional differences in the over-all rates of hirings and separations are also apparent and reflect, to some extent, the relative stability of non-agricultural employment in the various regions. Thus, the Maritime Provinces show approximately the same rates as for all Canada; Quebec indicates generally higher rates; Ontario, with its greater diversity of industry, has generally lower rates than all Canada; rates in the Prairie Provinces tend to be slightly higher than for Canada; and in British Columbia the highest rates are found. During the period to which these figures relate the most important single factor influencing them is the seasonal one. Thus, the relative importance of a few highly seasonal industries such as food processing, wood products and paper products in Quebec and of mining, food processing and wood products in British Columbia cause the generally higher hiring and separation rates in those provinces.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of that month.

"0" - Indicates no one employed

"-" - Indicates either no hirings or no separations

Table 2 - Number of Hirings and Separations per 100 Persons on the Payroll¹ in

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of that month.

"O" - Indicates no one employed

"-" - Indicates either no hirings or no separations

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of that month.

2. - Includes Northwest Territories.

"0" - Indicates no one employed

"-" - Indicates either no hirings or no separations

Table 5 - Number of Hirings and Separations per 100 Persons on the Payroll¹ in

GOVERNMENT OF CANADA

**HIRING AND SEPARATION RATES
IN
CERTAIN INDUSTRIES**

SEPTEMBER 1947 TO AUGUST 1949

DOMINION BUREAU OF STATISTICS
DEPARTMENT OF TRADE AND COMMERCE

COMPILED FROM MATERIAL SUPPLIED BY
THE UNEMPLOYMENT INSURANCE COMMISSION

Published by Authority of the Rt. Hon. C. D. Howe
Minister of Trade and Commerce

Prepared in the Unemployment Insurance Section
of the Labour and Prices Division,
Dominion Bureau of Statistics, Ottawa

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

September 1947 to August 1949.

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report of Hirings and Separations. The report form (required under the National Employment Service Regulations, 1948, Authority P.C. 4060) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 45,000 schedules are completed and returned to the Unemployment Insurance Commission in September and March of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month or, if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on strike or locked out unless they have separated from their employment. Employees on temporary layoff with definite instructions to return to work within thirty days are considered as still on the payroll and those absent on vacation (with or without pay) or because of sickness, accident or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area, so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units and many firms whose payroll records are maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey hirings, then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore the non-insured in industries coming within the purview of the Act are included. On the other hand, crews of vessels engaged in water transportation and longshoremen and stevedores are, on the whole, excluded since the hiring practices of these industries are such that data comparable with those secured for industry in general cannot be obtained from them. Logging is not included among the industries presented in these tables since the Unemployment Insurance Act applies to those engaged in logging only in British Columbia. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included since plans are now being formulated

to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including industries not separately specified in the balance of the table.

The accompanying tables present by sex for Canada (except Newfoundland) and regions the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used each month are the average (mean) of the numbers on the payroll at the beginning and at the end of that month.

The monthly percentages provided for the industry groups represent, then, gross hiring and separation rates in the industry groups to which they relate. These rates provide a measure against which the experience of individual establishments can be compared.

The relationship between hirings and separations at different times of the year, and over a period of several years provide useful information regarding seasonal and cyclical fluctuations in employment and economic activity. Thus, for all industries, a rise in hirings accompanied by a fall in separations would, in general, indicate an expansion of employment due to a seasonal or cyclical upswing. Similarly a reduction in hirings accompanied by a rise in separations would indicate a contraction in employment.

For "All Industries" the trend of hirings for the period covered was down slightly, the trend of separations following the same pattern. This is indicative of a stable employment situation. Reference to labour force sample survey data for the same period indicates that the level of employment at which stability occurred was close to full employment¹.

1. - The Labour Force Sample Survey for the weeks ending August 16, 1947 and August 20, 1949, show that persons with jobs as a percentage of the civilian labour force, were 98.6 and 98.2 p.c. respectively.

Normal seasonal fluctuations in employment were reflected for "All Industries" in Canada by an excess of hirings over separations in the spring and summer months; a tendency towards equality in the fall and early winter; and generally higher rates of separations than of hirings during the winter and early spring.

Fluctuations in hirings for "All Industries" were considerably greater for males than for females in the period covered, due to the employment of a much larger proportion of males in such highly seasonal industries as construction. Fluctuations in separations of males and females resulted in a very similar pattern for the two sexes.

Regional differences in the level and range of hirings and separations for "All Industries" are related to the character of the industries in those regions. For example, in relatively highly industrialized Ontario and Quebec, the rates of hirings and separations were lower and the range of fluctuations smaller than for Canada as a whole. In the Maritime Provinces and in British Columbia, which are characterized by a high percentage of employment in primary industries such as food processing and mining, the level of hirings and separations was higher than for Canada as a whole, and the range was greater. For the Prairie Provinces the level of hirings and separations and the range of fluctuations was about the same as for the country as a whole.

(1) - Payroll figures used for each month are the average (mean)
of the numbers on the payroll at the beginning and at the
end of the month.

(2) - The number of women employed in the industry is negligible.

(1) - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

(2) - The number of women employed in the industry is negligible.

"- " - Indicates either no hirings or no separations.

Table 2. - Number of Hirings and Separations per 100 Persons on the

Payroll⁽¹⁾ in Selected Industry Groups, for the MARITIME PROVINCES,

September 1947 to August 1949.

(1) - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

(2) - The number of women employed in the industry is negligible.

(3) - The number of persons employed in the industry is negligible.

Table 3. - Number of Hirings and Separations per 100 Persons on the Payroll⁽¹⁾ in Selected Industry Groups, for the PROVINCE OF QUEBEC, September 1947 to August 1949.

(1) Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

(2) - Includes Northwest Territories.

(3) - The number of women employed in the industry is negligible.

"-" Indicates either no hirings or no separations

Table 5. - Number of Hirings and Separations per 100 Persons

(1) - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

(2) - Includes Northwest Territories.

"-" - Indicates either no hirings or no separations.

Table 5. - Number of Hirings and Separations per 100 Persons

on the Payroll⁽¹⁾ in Selected Industry Groups, for

(1) - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

(2) - Includes Yukon.

"-" - Indicates either no hirings or no separations.

Table 6. - Number of Hirings and Separations per 100 Persons on the Payroll⁽¹⁾ in Selected Industry Groups, for the PROVINCE OF PRINCE COLUMBIA⁽²⁾, September 1947 to August 1949.

GOVERNMENT OF CANADA

HIRING AND SEPARATION RATES
IN
CERTAIN INDUSTRIES

SEPTEMBER 1948 TO AUGUST 1950

DOMINION BUREAU OF STATISTICS
DEPARTMENT OF TRADE AND COMMERCE

COMPILED FROM MATERIAL SUPPLIED BY
THE UNEMPLOYMENT INSURANCE COMMISSION

Published by Authority of the Rt. Hon. C. D. Howe
Minister of Trade and Commerce

Prepared in the Unemployment Insurance Section
of the Labour and Prices Division,
Dominion Bureau of Statistics, Ottawa

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

September 1948 to August 1950.

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report of Hirings and Separations. The report form (required under the National Employment Service Regulations, 1949, Authority P.C. 6126) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 45,000 schedules are completed and returned to the Unemployment Insurance Commission in September and March of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month or, if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less

than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on strike or locked out unless they have separated from their employment. Employees on temporary layoff with definite instructions to return to work within thirty days are considered as still on the payroll and those absent on vacation (with or without pay) or because of sickness, accident or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area, so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units and many firms whose payroll records are maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey hirings, then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore the non-insured in industries coming within the purview of the Act are included. On the other hand, crews of vessels engaged in water transportation and longshoremen and stevedores are, on the whole, excluded since the hiring practices of these industries are such that data comparable with those secured for industry in general cannot be obtained from them. Logging is included for all provinces commencing with March 1950. Prior to that date, the Unemployment Insurance Act only applied to those engaged in logging in British Columbia. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included since plans are now being formulated to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including industries not separately specified in the balance of the table.

The accompanying tables present by sex for Canada¹ and regions the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used each month are the average (mean) of the numbers on the payroll at the beginning and at the end of that month.

The monthly percentages provided for the industry groups represent, then, gross hiring and separation rates in the industry groups to which they relate. These rates provide a measure against which the experience of individual establishments can be compared.

1. - Newfoundland included in the report for the first time in September, 1949.

The relationship between hirings and separations at different times of the year, and over a period of several years provides useful information regarding seasonal and cyclical fluctuations in employment and economic activity. Thus, for all industries, a rise in hirings accompanied by a fall in separations would, in general, indicate an expansion of employment due to a seasonal or cyclical upswing. Similarly a reduction in hirings accompanied by a rise in separations would indicate a contraction in employment.

Hirings and separations data provide an indication of gross worker movements which underlie net changes in employment. Labour turnover as measured by the rate of separations (or hirings) also reflects fluctuations in the level of economic activity.

For all industries during the period - September 1948 to August 1950 inclusive - the relation of hirings to separations followed the customary seasonal pattern. Accordingly hirings exceeded separations in the summer months while separations assumed a higher level than hirings in the winter. A tendency towards equality of hirings and separations was noted with respect to the spring and fall seasons.

Fluctuations in hirings and separations for males were similar to that for total both sexes. This is related to the fact that males constitute about 75 percent of all workers employed in establishments covered by the survey. The pattern of both hirings and separations for males was similar to that for females. The level of hirings was also about the same for both sexes, but the level of separations was higher for females than for males. A possible explanation is the early withdrawal of females from the labour force because of marriage.

The overall pattern of hirings and separations is derived

from the experience for the various industries. The industry exerting the greatest influence is the manufacturing industry group (employing in excess of 40 percent of all workers in establishments surveyed), which exhibits regular seasonal fluctuations of moderate scope. The influence of industries such as construction and mining which display relatively large fluctuations tended to be offset by the representation in the survey of such industries as finance and public utility which are subject to relatively small fluctuations.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

2. - Newfoundland included in the report for the first time in September, 1949.

3. - Prior to March 1950, logging firms in British Columbia, only, reported.

4. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

2. - Newfoundland included in the report for the first time in September, 1949.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - Prior to March 1950, logging not included.
3. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - Includes Northwest Territories.
3. - Prior to March 1950, logging not included.
4. - The number of women employed in the industry is negligible.

DOMINION BUREAU OF STATISTICS
DEPARTMENT OF TRADE AND COMMERCE

COMPILED FROM MATERIAL SUPPLIED BY
THE UNEMPLOYMENT INSURANCE COMMISSION

Published by Authority of the Rt. Hon. C. D. Howe
Minister of Trade and Commerce

Prepared in the Unemployment Insurance Section
of the Labour and Prices Division,
Dominion Bureau of Statistics, Ottawa

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

March 1949 to February 1951.

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report of Hirings and Separations. The report form (required under the National Employment Service Regulations, 1949) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 45,000 schedules are completed and returned to the Unemployment Insurance Commission in September and March of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month, or if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less

than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on strike or locked out unless they have separated from their employment. Employees on temporary layoff with definite instructions to return to work within thirty days are considered as still on the payroll, and those absent on vacation (with or without pay) or because of sickness, accident or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area, so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units, and many firms whose payroll records are maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey, hirings then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore the non-insured in industries coming within the purview of the Act are included. On the other hand, crews of vessels engaged in water transportation and longshoremen and stevedores are, on the whole, excluded, since the hiring practices of these industries are such that data comparable with those secured for industry in general cannot be obtained from them. Logging is included for all provinces commencing with March 1950. Prior to that date, the Unemployment Insurance Act applied only to those engaged in logging in British Columbia. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included since plans are now being formulated to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including industries not separately specified in the balance of the table.

The accompanying tables present by sex, for Canada¹ and regions, the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used each month are the average (mean) of the numbers on the payroll at the beginning and at the end of that month.

The monthly percentages provided for the industry groups represent, then, gross hiring and separation rates in the industry groups to which they relate. These rates provide a measure against which the experience of individual establishments can be compared.

1. - Newfoundland included in the report for the first time in September, 1949.

The relationship between hirings and separations at different times of the year, and over a period of several years, provides useful information regarding seasonal and cyclical fluctuations in employment and economic activity. Thus, for all industries, a rise in hirings accompanied by a fall in separations would, in general, indicate an expansion of employment due to a seasonal or cyclical upswing. Similarly a reduction in hirings accompanied by a rise in separations would indicate a contraction in employment.

Hirings and separations data provide an indication of gross worker movements which underlie net changes in employment. Labour turnover as measured by the rate of separations (or hirings) also reflects fluctuations in the level of economic activity.

The normal seasonal pattern of hirings and separations for "All Industries" in Canada prevailed during the period March 1949 to February 1951. This was evidenced by an excess of hirings over separations during the summer months, a tendency toward equality in spring and fall, and an excess of separations over hirings during the winter season. Prior to March 1950, logging in British Columbia only, was included in the survey. With the inclusion of logging in all provinces, subsequent to that date, hiring and separation rates for all Canada rose, reflecting the effect of the high turnover rate in the logging industry east of the Cascades.

The "All Industries" rates reflect the relative importance of various industries in the Canadian industrial complex. Manufacturing, the industry giving employment to the greatest number of workers, characteristically exhibits a rather narrow range of fluctuations thereby exerting a stabilizing influence on the overall pattern of fluctuations. Industries

such as non-metal mining, food processing and wood products manufacturing, in general exhibit quite wide fluctuations and affect the general level of fluctuations accordingly. Such industries as public utilities and finance, insurance and real estate which exhibit smaller fluctuations than manufacturing tend, however, to counteract the effect of these more seasonal industries on the general level of fluctuations.

In similar fashion the industrial structure of the various regions explains, in large measure, the level and pattern of hirings and separations in those regions. Thus in highly industrialized Ontario and Quebec fluctuations in hirings and separations tend to be somewhat smaller than in the other regions where primary industries are relatively more important.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

2. - Newfoundland included in the report for the first time in September, 1949.

3. - Prior to March 1950, logging firms in British Columbia, only, reported.

4. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - Newfoundland included in the report for the first time in September, 1949.
3. - Prior to March 1950, logging not included.
4. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - Prior to March 1950, logging not included.
3. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - Includes Northwest Territories.
3. - Prior to March 1950, logging not included.
4. - The number of women employed in the industry is negligible.

Table 5. - Number of Hirings and Separations per 100 Persons on the
Payroll¹ in Selected Industry Groups, for the
PRAIRIE REGION², March 1949 to February 1951.

DEPARTMENT OF TRADE AND COMMERCE

COMPILED FROM MATERIAL SUPPLIED BY
THE UNEMPLOYMENT INSURANCE COMMISSION

Published by Authority of the Rt. Hon. C. D. Howe
Minister of Trade and Commerce

Prepared in the Unemployment Insurance Section
of the Labour and Prices Division,
Dominion Bureau of Statistics, Ottawa

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

March 1950 to February 1952

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report of Hirings and Separations. The report form (required under the National Employment Service Regulations, 1949) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 50,000 schedules are completed and returned to the Unemployment Insurance Commission in March and September of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month, or if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on strike or locked out unless they have separated from their employment. Employees on temporary lay-off with definite

instructions to return to work within thirty days are considered as still on the payroll, and those absent on vacation (with or without pay) or because of sickness, accident or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area, so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units, and many firms whose payroll records are maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey, hirings then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore

the non-insured in industries coming within the purview of the Act are included. On the other hand, crews of vessels engaged in water transportation and longshoremen and stevedores are, on the whole, excluded, since the hiring practises of these industries are such that data comparable with those secured for industry in general cannot be obtained from them. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included since plans are now being formulated to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including industries not separately specified in the balance of the table.

The accompanying tables present by sex, for Canada and regions, the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used each month are the average (mean) of the numbers on the payroll at the beginning and at the end of that month.

The monthly percentages, then, present gross hiring and separation rates or gross rates of labour turnover in the industries to which they relate. Rates of net labour turnover can be computed by obtaining the positive difference between the two rates. Similarly "replacement rates" can be obtained by using the hiring or separation rate, whichever is lower.

The gross rates of labour turnover which are the subject of the following discussion reflect levels of economic activity and provide a measure of gross worker movements which underlie net changes in employment. Thus a changing volume of economic activity is associated with changing levels of hirings and

separations and movements in the overall level of employment are related to high rates of turnover in certain industries or areas, and low rates elsewhere.

The levels of hirings and separations at different seasons of the year reflect seasonal variations in activity. Active seasons of the year are characterized by a high level of hirings and a low level of separations while during the off seasons the reverse situation applies. Similarly the generally high levels of employment which have been a feature of the post-war years have been associated with relative stability at fairly high levels for both hirings and separations.

In addition to the information obtained from a study of hiring and separation rates separately, the relationship between these two sets of rates provides significant data. Gross movements in employment for separate industries and areas by sex reveal the shifting composition of the working force in each case.

The normal seasonal pattern of hirings and separations for "All Industries" in Canada prevailed during the period March 1950 to February 1952. This was evidenced by an excess of hirings over separations during the summer months, a tendency toward equality in spring and fall, and an excess of separations over hirings during the winter season.

The "All Industries" rates reflect the relative importance of various industries in the Canadian industrial complex. Manufacturing, the industry giving employment to the greatest number of workers, characteristically exhibits a rather narrow range of fluctuations thereby exerting a stabilizing influence on the overall pattern of fluctuations. Industries such as non-metal mining, food processing and wood products manufacturing, in general exhibit quite wide fluctuations and affect the general level of fluctuations accordingly. Such industries

as public utilities and finance, insurance and real estate which exhibit smaller fluctuations than manufacturing tend, however, to counteract the effect of these more seasonal industries on the general level of fluctuations.

In similar fashion the industrial structure of the various regions explains, in large measure, the level and pattern of hirings and separations in those regions. Thus in highly-industrialized Ontario and Quebec fluctuations in hirings and separations tend to be somewhat smaller than in other regions where primary industries are relatively more important.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

2. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - Includes Northwest Territories.
3. - The number of women employed in the industry is negligible.

GOVERNMENT OF CANADA

HIRING AND SEPARATION RATES
IN
CERTAIN INDUSTRIES

SEPTEMBER 1950 TO AUGUST 1952

EDMOND CLOUTIER, C.M.G., O.A., D.S.P.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1953

DOMINION BUREAU OF STATISTICS
DEPARTMENT OF TRADE AND COMMERCE

COMPILED FROM MATERIAL SUPPLIED BY
THE UNEMPLOYMENT INSURANCE COMMISSION

Published by Authority of the Rt. Hon. C. D. Howe
Minister of Trade and Commerce

Prepared in the Unemployment Insurance Section
of the Labour and Prices Division,
Dominion Bureau of Statistics, Ottawa

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

September 1950 to August 1952.

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report of Hirings and Separations. The report form (required under the National Employment Service Regulations, 1949) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 50,000 schedules are completed and returned to the Unemployment Insurance Commission in March and September of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month, or if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on

strike or locked out unless they have separated from their employment. Employees on temporary lay-off with definite instructions to return to work within thirty days are considered as still on the payroll, and those absent on vacation (with or without pay) or because of sickness, accident or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units, and many firms whose payroll records are maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey, hirings then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore the non-insured in industries coming within the purview of the

Act are included. On the other hand, crews of vessels engaged in water transportation and longshoremen and stevedores are, on the whole, excluded, since the hiring practises of these industries are such that data comparable with those secured for industry in general cannot be obtained from them. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included since plans are now being formulated to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including industries not separately specified in the balance of the table.

The accompanying tables present by sex, for Canada and regions, the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

The monthly percentages, then, present gross hirings and separation rates or gross rates of labour turnover in the industries to which they relate. Rates of net labour turnover can be computed by obtaining the positive difference between the two rates. Similarly "replacement rates" can be obtained by using the hiring or separation rate, whichever is lower.

The gross rates of labour turnover which are the subject of the following discussion reflect levels of economic activity and provide a measure of gross worker movements which underlies net changes in employment. Thus a changing volume of economic activity is associated with changing levels of hirings and separations and movements in the overall level of employment

are related to high rates of turnover in certain industries or areas, and low rates elsewhere.

The levels of hirings and separations at different seasons of the year reflect seasonal variations in activity. Active seasons of the year are characterized by a high level of hirings and a low level of separations while during the off seasons the reverse situation applies. Similarly the generally high levels of employment which have been a feature of the post-war years have been associated with relative stability at fairly high levels for both hirings and separations.

In addition to the information obtained from a study of hiring and separation rates separately, the relationship between these two sets of rates provides significant data. Gross movements in employment for separate industries and areas by sex reveal the shifting composition of the working force in each case.

Throughout the period under consideration, the customary seasonal relationships between hirings and separations were observed to exist. This from January to March, when the level of employment is normally stable and at a seasonal low, hirings and separations were in balance. Commencing in April and continuing through June, a rise in the level of employment was associated with an excess of hirings over separations. Equality of hirings and separations at a high level of employment was characteristic of the remaining late summer months and continued into the harvest season. This equality of hirings and separations, associated with a somewhat lower level of employment, obtained during October and November, followed by a reduction of hirings in relation to separations in December.

Although seasonal fluctuations in hirings and separations are

common to all industries, the incidence of seasonality is by no means uniform either between industries or industry sub-groups. This fact tends to be obscured in an examination of the rates for "All Industries" because of the relatively great importance of manufacturing which employs over 90 percent of all persons covered by the survey. Thus the pattern of hirings and separations for "All Industries" is closely related to the pattern for the manufacturing industry as a whole.

Industries such as construction and forestry and logging exhibit much more extreme fluctuations in both hirings and separations than the total for all industries. The timing of these fluctuations is also in some instances different from the pattern for total all industries. For example, both of the industries mentioned above have hiring and separation peaks which are not identical with the pattern for manufacturing but which are hidden by the fluctuations in the more heavily weighted manufacturing industry.

Within the manufacturing industry as a whole a similar situation exists. Such industry sub-groups as foods and beverages, wood products and to a somewhat lesser extent transportation equipment are highly seasonal in their operations. Balanced against these are industry subgroups such as printing and publishing, electrical apparatus and supplies and tobacco and tobacco products which exhibit relatively stable patterns of hirings and separations.

Hirings and separations by region also display seasonal patterns related to the economic characteristics of the region. In provinces such as Ontario and Quebec, in which manufacturing occupies an important position, the scope of fluctuations in hirings and separations was less than in the Pacific and Atlantic Regions where primary industries are relatively more important.

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

(Compiled from material supplied by the Unemployment Insurance Commission)

Published by Authority of

The Right Honourable C. D. Howe, Minister of Trade and Commerce

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

March 1951 to February 1953.

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report of Hirings and Separations. The report form (required under the National Employment Service Regulations, 1949) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 50,000 schedules are completed and returned to the Unemployment Insurance Commission in March and September of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month, or if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on

strike or locked out unless they have separated from their employment. Employees on temporary lay-off with definite instructions to return to work within thirty days are considered as still on the payroll, and those absent on vacation (with or without pay) or because of sickness, accident or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units, and many firms whose payroll records are maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey, hirings then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore the non-insured in industries coming within the purview of the

Act are included. On the other hand, crews of vessels engaged in water transportation and longshoremen and stevedores are, on the whole, excluded, since the hiring practises of these industries are such that data comparable with those secured for industry in general cannot be obtained from them. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included, although plans are now being formulated to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including industries not separately specified in the balance of the table.

The accompanying tables present by sex, for Canada and regions, the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

The monthly percentages, then, present gross hiring and separation rates or gross rates of labour turnover in the industries to which they relate. Rates of net labour turnover can be computed by obtaining the positive difference between the two rates. Similarly "replacement rates" can be obtained by using the hiring or separation rate, whichever is lower.

The gross rates of labour turnover which are the subject of the following discussion reflect levels of economic activity and provide a measure of gross worker movements which underlies net changes in employment. Thus a changing volume of economic activity is associated with changing levels of hirings and separations and movements in the overall level of employment

are related to high rates of turnover in certain industries or areas, and low rates elsewhere.

The levels of hirings and separations at different seasons of the year reflect seasonal variations in activity. Active seasons of the year are characterized by a high level of hirings and a low level of separations while during the off seasons the reverse situation applies. Similarly the generally high levels of employment which have been a feature of the post-war years have been associated with relative stability at fairly high levels for both hirings and separations.

In addition to the information obtained from a study of hiring and separation rates separately, the relationship between these two sets of rates provides significant data. Gross movements in employment for separate industries and areas by sex reveal the shifting composition of the working force in each case.

Throughout the period under consideration, the customary seasonal relationships between hirings and separations were observed to exist. Thus from January to March, when the level of employment is normally stable and at a seasonal low, hirings and separations were in balance. Commencing in April and continuing through June, a rise in the level of employment was associated with an excess of hirings over separations. Equality of hirings and separations at a high level of employment was characteristic of the remaining late summer months and continued into the harvest season. This equality of hirings and separations, associated with a somewhat lower level of employment, obtained during October and November, followed by a reduction of hirings in relation to separations in December.

Although seasonal fluctuations in hirings and separations are

common to all industries, the incidence of seasonality is by no means uniform either between industries or industry sub-groups. This fact tends to be obscured in an examination of the rates for "All Industries" because of the large number of persons employed in manufacturing relative to the total of persons covered by the survey. Thus the pattern of hirings and separations for "All Industries" is closely related to the pattern for the manufacturing industry as a whole.

Industries such as construction and forestry and logging exhibit much more extreme fluctuations in both hirings and separations than the total for all industries. The timing of these fluctuations is also in some instances different from the pattern for total all industries. For example, both of the industries mentioned above have hiring and separation peaks which are not identical with the pattern for manufacturing but which are hidden by the fluctuations in the more heavily weighted manufacturing industry.

Within the manufacturing industry as a whole a similar situation exists. Such industry sub-groups as foods and beverages, wood products and to a somewhat lesser extent transportation equipment are highly seasonal in their operations. Balanced against these are industry sub-groups such as printing and publishing, electrical apparatus and supplies and tobacco and tobacco products which exhibit relatively stable patterns of hirings and separations.

Hirings and separations by region also display seasonal patterns related to the economic characteristics of the region. In provinces such as Ontario and Quebec, in which manufacturing occupies an important position, the scope of fluctuations in hirings and separations was less than in the Pacific and Atlantic Regions where primary industries are relatively more important.

Table 1. - Number of Hirings and Separations per 100 Persons on the Payroll¹ in Selected Industry Groups, for C A N A D A, March 1951 to February 1953.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

2. - The number of women employed in the industry is negligible.

1. - Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
2. - Includes Yukon.
3. - The number of women employed in the industry is negligible.

Table 6. - Number of Hirings and Separations per 100 Persons on the Payroll¹ in Selected Industry Groups, for the PACIFIC REGION,² March 1951 to February 1953.

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

(Compiled from material supplied by the Unemployment Insurance Commission)

Published by Authority of

The Right Honourable C. D. Howe, Minister of Trade and Commerce

HIRING AND SEPARATION RATES IN CERTAIN INDUSTRIES

SEPTEMBER 1951 TO AUGUST 1953

The basic data for this report are secured from the Unemployment Insurance Commission by means of the Commission's Semi-Annual Report of Hirings and Separations. The report form (required under the National Employment Service Regulations, 1949) is completed by each establishment in Canada having one or more employees insured under the Unemployment Insurance Act and employing, in all, ten or more persons, except that all units of chain and multiple firms are covered regardless of the number employed in a unit. In all, therefore, some 50,000 schedules are completed and returned to the Unemployment Insurance Commission in March and September of each year, the data being supplied, by sex, for each month in the six-month period. The respondent retains one copy, one is kept in the Local Employment Office of the Commission and one sent to the Bureau of Statistics for compilation. In addition to the number of hirings and separations in each month, the report requires the number in the employ of the establishment at the beginning and end of the period as well as at the end of each intervening month.

With regard to employment, respondents are asked to include all persons on the payroll and still in the employ of the establishment at the end of the month, or if more convenient, at the end of the payroll period immediately preceding the month end. Casual employees, defined as those employed for a particular job or jobs of a casual nature for a period of less than six days' duration, are specifically excluded from the report. Part-time employees and those on short time are included among the employed as are those on strike or locked out unless they have separated from their employment. Employees on temporary lay-off with definite instructions to return to work within thirty days are considered as still on the payroll, and those absent on vacation (with or without pay) or because of sickness, accident or other justifiable reason and who are expected to return to work, are included among those employed.

Since the data are secured from establishments, employees transferred from one establishment to another are generally reported as a separation from the establishment from which they were transferred and as a hiring in the establishment to which they have been transferred. The term "establishment", however, may be taken to include a group of units operated by one firm in an area, so long as the units are engaged in the same kind of business. Thus, a firm operating several chain stores in a city may, if it so desires, submit one report covering those units, and many firms whose payroll records are

maintained on an area basis report in this manner. A special arrangement has been made with the chartered banks, which operate many branches, by which transfers from branch to branch are reported separately and are not included as hirings or separations.

For purposes of this survey, hirings then, consist of the number of persons added to a payroll during a period (excluding casual employees) and separations consist of persons whose employment with an establishment has been terminated during a period and whose names have been removed from the payroll either because they have quit; been laid off; discharged; or have separated for miscellaneous reasons such as marriage, retirement or death.

Industrially, the coverage of the survey is coincident with the coverage of the Unemployment Insurance Act with a few exceptions. Establishments having any insured workers complete the form for all their employees and therefore the non-insured in industries coming within the purview of the Act are included. On the other hand, crews of vessels engaged in water transportation and long-shoremen and stevedores are, on the whole, excluded, since the hiring practices of these industries are such that data comparable with those secured for industry in general cannot be obtained from them. Government service (except Crown Companies and certain special boards and agencies such as liquor commissions and hydro-electric commissions) is not included, although plans are now being formulated to obtain employment, payrolls, hirings and separations relating to regular government services. When these data become available they can be included here. It should be noted that the rates shown for "All Industries" on each table refer to the total of all establishments covered, including industries not separately specified in the balance of the table.

The accompanying tables present by sex, for Canada and regions, the number of hirings and separations per 100 persons on the payroll of the establishments covered. Payroll figures used each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.

Hiring and separation rates have been used in a variety of ways to measure labour turnover. In the United States labour turnover has been measured as a "flux rate" i.e., the aggregate of the hiring and separation rates or a "replacement rate" i.e.,

the hiring or separation rate whichever is lower. More recently labour turnover has been measured by the rate of separations and in Canada this definition has been followed since the inception of the survey of hirings and separations.

The rates of hirings and separations which are the subject of the following discussion reflect levels of economic activity and provide a measure of gross worker movements which underlies net changes in employment. Thus a changing volume of economic activity is associated with changing levels of hirings and separations and movements in the overall level of employment are related to high rates of turnover in certain industries or areas, and low rates elsewhere.

The levels of hirings and separations at different seasons of the year reflect seasonal variations in activity. Active seasons of the year are characterized by a high level of hirings and a low level of separations while during the off seasons the reverse situation applies. Similarly the generally high levels of employment which have been a feature of the post-war years have been associated with relative stability at fairly high levels for both hirings and separations.

In addition to the information obtained from a study of hiring and separation rates separately, the relationship between these two sets of rates provides significant data. Gross movements in employment for separate industries and areas by sex reveal the shifting composition of the working force in each case.

Throughout the period under consideration, the customary seasonal relationships between hirings and separations were observed to exist. Thus from January to March, when the level of employment is normally stable and at a seasonal low, hirings and separations were in balance. Commencing in April and continuing through June, a rise in the level of employment was associated with an excess of hirings over separations. Equality of hirings and separations at a high level of employment was characteristic of the remaining late summer months and continued into the harvest season. This equality

of hirings and separations, associated with a somewhat lower level of employment, obtained during October and November, followed by a reduction of hirings in relation to separations in December.

Although seasonal fluctuations in hirings and separations are common to all industries, the incidence of seasonality is by no means uniform either between industries or industry sub-groups. This fact tends to be obscured in an examination of the rates for "All Industries" because of the large number of persons employed in manufacturing relative to the total of persons covered by the survey. Thus the pattern of hirings and separations for "All Industries" is closely related to the pattern for the manufacturing industry as a whole.

Industries such as construction and forestry and logging exhibit much more extreme fluctuations in both hirings and separations than the total for all industries. The timing of these fluctuations is also in some instances different from the pattern for total all industries. For example, both of the industries mentioned above have hiring and separation peaks which are not identical with the pattern for manufacturing but which are hidden by the fluctuations in the more heavily weighted manufacturing industry.

Within the manufacturing industry as a whole a similar situation exists. Such industry sub-groups as foods and beverages, wood products and to a somewhat lesser extent transportation equipment are highly seasonal in their operations. Balanced against these are industry sub-groups such as printing and publishing, electrical apparatus and supplies, and tobacco and tobacco products which exhibit relatively stable patterns of hirings and separations.

Hirings and separations by region also display seasonal patterns related to the economic characteristics of the region. In provinces such as Ontario and Quebec, in which manufacturing occupies an important position, the scope of fluctuations in hirings and separations was less than in the Pacific and Atlantic Regions where primary industries are relatively more important.

TABLE 1. Number of Hirings and Separations per 100 Persons on the Payroll ¹ in Selected Industry Groups, for CANADA, September 1951 to August 1953

1. Payroll figures used for each month are the average (mean) of the numbers on the payroll at the beginning and at the end of the month.
 2. The number of women employed in the industry is negligible.

TABLE 2. Number of Hirings and Separations per 100 Persons on the Payroll¹ in Selected Industry Groups, for the ATLANTIC REGION, September 1951 to August 1953

Percent of average number on payroll during the month																												No.
